

CBT FOR MULTIPLE SYMPTOM SETS: DAY 1 AGENDA

- > Introductory Remarks
- > Socialisation to the Cognitive Model
- > Levels of Cognition
- > Early Maladaptive Schemas
- > Behavioural Pattern Breaking
- > Cognitive Conceptualisation
- > CBT Tools and Techniques
- > Application to Clinical Practice

MYTHS ABOUT CBT

 $\boldsymbol{\succ}$ CBT Deals only with matters of the head and not matters of the heart

 $\boldsymbol{\flat}$ In CBT the therapeutic relationship isn't important

> CB7 is helpful for simple problems, but to treat more serious problems you need a more complex approach

> CBT is just about positive thinking

> CBT doesn't get at the "root" of the problem

WHY CBT??

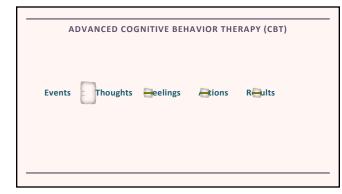

- > Easily implemented in clinical setting
- > Evidence based treatment
- > Neurobiological findings

COGNITIVE BEHAVIOR THERAPIES

"A SET OF PSYCHOTHERAPEUTIC INTERVENTIONS THAT ATTEMPTS TO HELP CLIENTS AMELIORATE SYMPTOMS AND ENHANCE GENERAL WELL-BEING BY FOCUSING ON DIFFERENT ASPECTS OF THINKING AND BEHAVIOR"

CBT UMBRELLA/"OFFSHOOT" MODELS

- * Rational Emotive Therapy
- * Schema-Focused Therapy
- * Dialectical Behavior Therapy
- * EMDR
- * Acceptance & Commitment Therapy
- * Strengths Based Cognitive Therapy
- * Trial Based Cognitive Therapy
- * Mindfulness-Based Cognitive Therapy

DIALECTICAL BEHAVIOR THERAPY (DBT)

DIALECTICAL BEHAVIOR THERAPY

- > Developed by Marsha Linehan in the 1970s
- > Looking for a method to treat chronically suicidal
- Found traditional CBT to be too invalidating
 Added validation to empirically supported CBT
- > Concept of Dialectics

DIALECTICAL BEHAVIOR THERAPY

"Juxtaposes contradictory ideas and seeks to resolve a conflict; a method of examining opposing ideas in order to find truth"

DIALECTICAL BEHAVIOR THERAPY: CORE MODULES

- > Mindfulness Skills
- > Emotion Regulation Skills
- > Distress Tolerance Skills
- > Interpersonal Effectiveness Skills

COGNITIVE BEHAVIOR THERAPY (CBT)

COGNITIVE BEHAVIOR THERAPY (CBT)

> Aaron T. Beck, 1960, University of Pennsylvania

> Principle that thoughts influence feelings

_	ADVANCED COGNITIVE BEHAVIOR THERAPY (CBT)						
	Events	Thoughts	eelings	H tions	Raults		

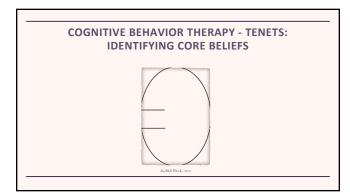

COGNITIVE BEHAVIOR THERAPY - CORE BELIEFS

> Core Beliefs/Schemas

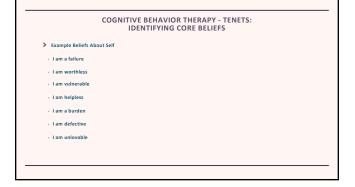

- > Beck identified beliefs in 3 different areas
- 1. Beliefs about self
- 2. Beliefs about others
- 3. Beliefs about the world

COGNITIVE BEHAVIOR THERAPY - TENETS

- > Term "schema" Coined in 1926 by Piaget "Structures that integrate meaning into events
- > Beck "Cognitive structures that organize experience and behavior"
- > Landau & Goldfried "mental filters that guide the processing of information"

7

Others are mean

Others are uncaring
 Others are self-absorbed

Others aren't deserving of my time

Others are to be taken advantage of

Others are unreliable
 Others are untrustworthy

COGNITIVE BEHAVIOR THERAPY - TENETS: IDENTIFYING CORE BELIEFS

> Example Beliefs About the World

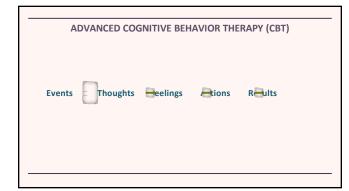

The world is exciting

The world is boring

The world is scary
 The world is evil

- The world is a lost cause
- I am defective

The world is dangerous

SCHEMA FOCUSED THERAPY (SFT)

SCHEMA FOCUSED THERAPY (SFT)

- > Broad, comprehensive theme or pattern
- > Comprised of memories, cognitions, emotions, bodily sensations
- > Developed in childhood, elaborated in adulthood
- > 18 Schamas in 5 different domains

SCHEMA FOCUSED THERAPY (SFT)

- > Domain #1: Disconnection and Rejection
- Abandonment
- MistrustDefectiveness
 - -----
- Emotional Deprivation
- Social Isolation

SCHEMA FOCUSED THERAPY (SFT)

- > Domain #2: Impaired Autonomy & Performance
- Dependence
- Vulnerability
- Enmeshment
 Failure
-

SCHEMA FOCUSED THERAPY (SFT)

- > Domain #3: Impaired Limits
 - Entitlement/Grandiosity
 - Insufficient Self-Control

SCHEMA FOCUSED THERAPY (SFT)

> Domain # 4: Others Directness

Subjugation

Self-Sacrifice

Approval Seeking

SCHEMA FOCUSED THERAPY (SFT)

> Domain #5: Overvigilance

Negativity

Emotional Inhibition

Unrelenting Standards

Punitiveness

SCHEMA FOCUSED THERAPY (SFT): CHARACTERISTICS OF SCHEMAS

> Active vs Dormant

> Compelling

> Pervasive vs Discrete

COGNITIVE BEHAVIOR THERAPY (CBT): SCHEMA REINFORCEMENT PROCESS

- > Maintenance
- > Avoidance
- > Overcompensation

BREAK

Cognitive Conceptualisation: The Road to Recovery

COGNITIVE CONCEPTUALIZATION: THE ROADMAP TO RECOVERY

> Develop Hypothesis

- > Look for Opportunity to Share With Patient
- > Ongoing with Accumulation of New Data

CONCEPTUALIZATION DRIVES GOAL SETTING

- 1. Problem List
- 2. Goal List
- 3. Behavioral Targets
- 4. Identify Triggers for Behaviors
- 5. Identify Cognitions associated w/ target behaviors

CONCEPTUALIZATION DRIVES TREATMENT PLANNING

DOCUMENTATION ACRONYM

- в
- I.
- R
- P
- Ρ

CONCEPTUALIZATION DRIVES DOCUMENTATION

CASE STUDY: "LISA"

CASE EXAMPLE - LISA: COGNITIVE CUE CARD

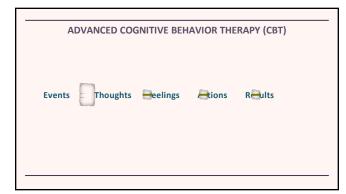

CASE EXAMPLE - LISA: COPING CARD

BREAK

CBT TOOLS AND TECHNIQUES

TYPES OF INTERVENTIONS

- 1. Environmental Interventions
- 2. Behavioral Interventions
- 3. Cognitive Interventions
- 4. Pharmacological Interventions

COGNITIVE INTERVENTIONS

1. Mindfulness

2. Distraction

3. Cognitive Restructuring

MINDFULNESS EXERCISE

DISTRACTION TECHNIQUES

1. Take a hot bath 2.Paint 3.Go for a walk 4.Go a a sume on my phone 4.Go a a subb 5.Strothing exercises 7. Practica Karate/Martial arts 8.Lift weights 9.Play with yar/stressball 10.Call a friend

COGNITIVE RESTRUCTURING

- > Identify and Label Distortions
- > Challenging
- > Rational Disputation > Statistics and Likelihood
- > Imagery
- Perspective/ComparisonPolling Exercises
- > Belief Modification Strategies

COGNITIVE DISTORTIONS

IDENTIFYING AND LABELLING COGNITIVE DISTORTIONS

I. Rationalization. In an attempt to protect yourself from hurt feelings, you create excuss for events in life that don't go your way or for poor choices you make. We might all these *formioingring datamatic* that give ourselves or someone else permission to do something that is in some way unhealthy.

2. Overgeneralization. You categorize different poople, places, and entities based on your own experiences with each particular thing. For example, if you have been treated poorly by mein in the past, "all men are mean," or if your first wife cheated on you, "all women are mainfaild." By overgeneralizing, you are set on experiences that don't fit your particular stereotype. This is the distortion on which all of those "sms" (e.g., natism, exism) are based.

3.Allow outling thinking. This refers to a tendency to see things in black and white categories with no consideration for gay. You see yourself, others, and often the whole workd in only possive or negative extremes rather than considering that action traje instant how to be positive and question activity of the positive and the set of the positive activity of the p

COGNITIVE DISTORTIONS

4. Discounting the positive. You reject positive experiences by insisting that they "don't count" for some reason or another. In this way, you can maintain a n that is contradicted by your everyday experiences. The terms *motal filter and infante abstrative* basically desceibe the same process.

5. Fortune telling. You anticipate that things will turn out hadly and feel convinced that your prediction is already an established fact based on your experience past. Predicting a negative outcome before any outcome occurs leads to anxiety.

6. Mind reading. Rather than predicting future events, enguging in this distortion involves predicting that you know what someone else is thinking when in reality y This distortion commonly occurs in communication problems between romantic partners.

7. Should statements. You place false or unrealistic expectations on yourself or others, thereby setting yourself up to feel angry, guilty, or disappointed. Words such as *sught ts, mut, hat ts, and, ing, and any other indicative of "should" thinking.*

8. Emotional reasoning. You assume that your negative feelings reflect the way things really are. "I feel it, therefore it must be true."

10. Personalization. You see yourself as the cause of some external negative event for which, in fact, you were not prin that is not about you and get your feelings hurt.

9. Magnification. You exaggerate the importance of things, blowing them way out of proportion. Often, this takes the form of fortune telling and/or mind reading to an extreme. This way of thinking may also be referred to as *antantphizing or anfallzing*.

MODIFYING COGNITIONS – IDENTIFYING ATS

> Pt language

> "What was going through your minel?"

> Thought Logs

> Journaling

COGNITIVE RESTRUCTURING - ELICITING BELIEFS

> Downward Arrow

- > Themes in Thought Logs
- > Heightened Affect
- > Belief Questionnaire

COGNITIVE INTERVENTIONS: DEALING WITH YOUR "INTERNAL ROOMMATE"

COGNITIVE INTERVENTIONS: WHAT ARE YOU TELLING YOURSELF?

COGNITIVE RESTRUCTURING

Identify Distorted Thought and Challenge!

HOW DO WE CHALLENGE OUR THOUGHTS?

- Is It Rational?
- What is the likelihood?
- How important is it?If I act on these thoughts what could happen?
- What is the evidence this thought is true?
- Is it helpful?
- Acceptance (if cannot change)
- Are there any alternative explanations?
- Am I blowing it out of proportion?
- Perspective-taking? Comparisons?
- Are there any exceptions? • Reassigning blame
- Continuums
 - Smile?
