

---

---

---

---

---

---

---

---

---

---

---

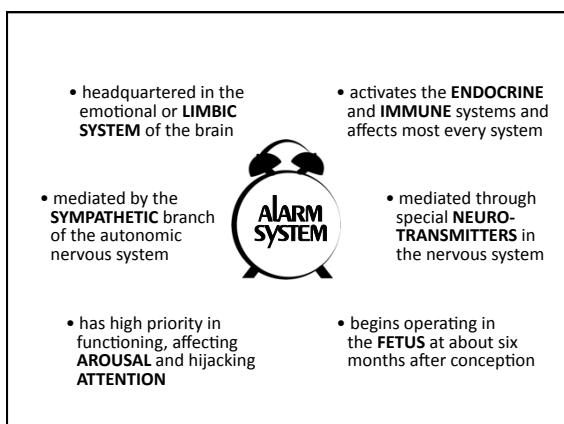

---

---

---

---

---

---

---

---

---

---

---

---

---

- alarm is a **PRIMAL** emotion that can exist without any awareness or cognitive input or involvement
- is meant to take care of us by moving us to **CAUTION**
- when felt, has a significant **TEMPERING** effect on behaviour
- once activated, alarm seeks **RESOLUTION** in one way or another. Failure to resolve alarm results in **RESIDUAL** alarm.
- alarm can **DISPLACE** other emotions as drivers of behaviour when more intense
- alarm and its effect may or may not be **FELT**, or be felt in different ways
- is often **PROVOKED** by adults as a way of managing behaviour
- alarm is a very **VULNERABLE** emotion to feel as it brings us face to face with what threatens us

---

---

---

---

---

---

---

---

**ATTACHMENT is our preeminent need**  
**so SEPARATION is our greatest threat**

- attachment is about the drive towards **TOGETHERNESS** in all its various forms
- it follows that facing separation is our greatest threat and the essence of **STRESS**
- the primary purpose of attachment is move us to take **CARE** of each other – *attachment replaces survival in mammals*
- alarm is one of three primal emotions evoked to **SOLVE** the problem of separation (the other two being *frustration* and *separation-triggered pursuit*)
- attachment is powerful, primal, primordial and **PREEMINENT** – the first of three basic drives (play and achievement)
- the **NATURE** of the separation faced is directly derived from the nature of one's attachments

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

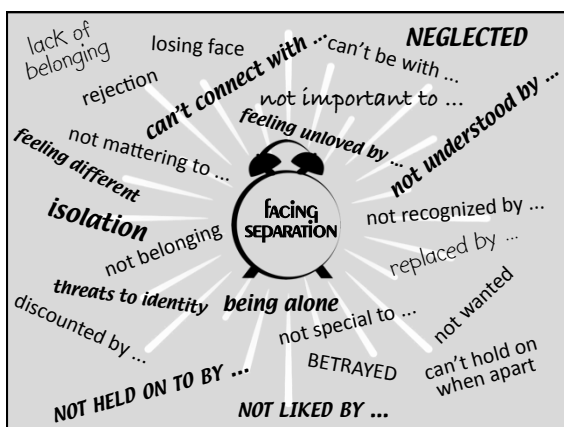

---

---

---

---

---

---

---

---

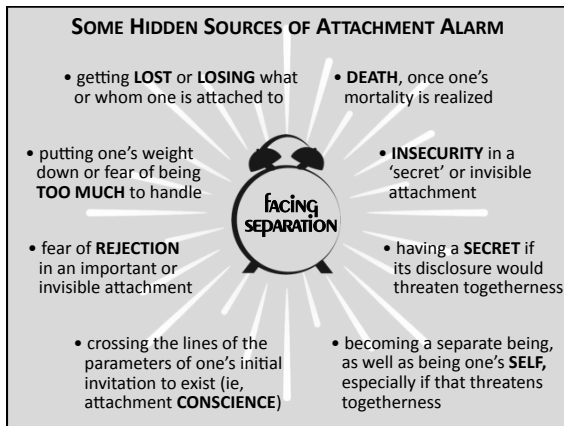

---

---

---

---

---

---

---

---

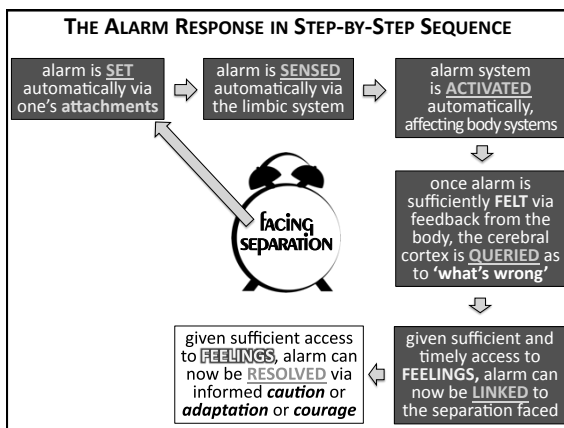

---

---

---

---

---

**Adapting to Alarming Separation that Cannot be Avoided**

- futility is typically felt as **SADNESS** and usually accompanied by **TEARS** of sadness in the young or when intense
- **RESOLVES** alarm, providing some **REST** and **RELIEF** from the primal emotion
- enables a **LETTING GO** of attempts to control or avoid alarming scenarios
- develops the **RESILIENCE** to handle a world full of separation alarm
- enables **RECOVERY** from alarming events and alarming attachments
- children often need to be gently but firmly **'HELD'** in the experience of futility until it is **FELT**

*since adaptation is an emotional process, futility must be FELT*

---

---

---

---

---

---

---

---

**ALARMING SEPARATION WHERE AVOIDANCE IS FUTILE**

- bedtime, loss and mortality
- separation resulting from going to school, moving, divorce of parents, parents working, hospitalization, etc, etc
- the dawning realization of the inevitability of loss and losing
- always being wanted, chosen and preferred by those whom we want, choose or prefer
- being liked by everyone or avoiding rejection
- the lack of invitation to exist in another's presence
- the loss of affection or significance to another
- securing the contact and closeness in an attachment

*To attach is to face separation, but we **must** attach and so facing separation cannot ever be truly avoided.*

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

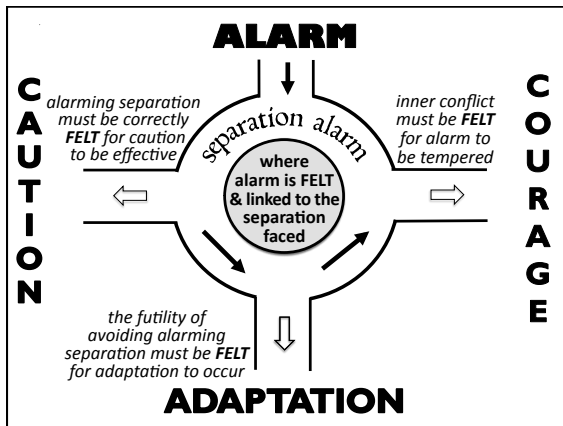

---

---

---

---

---

---

---

---

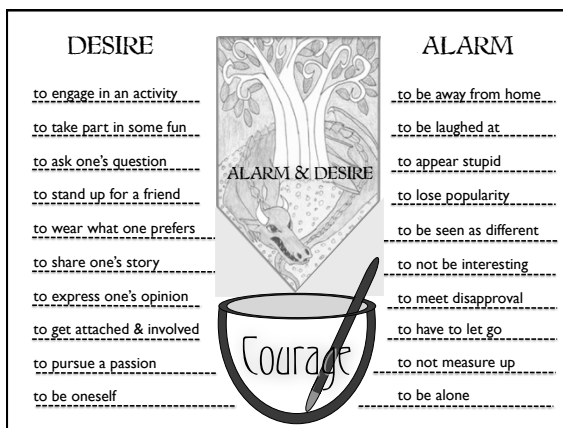

---

---

---

---

---

---

---

---

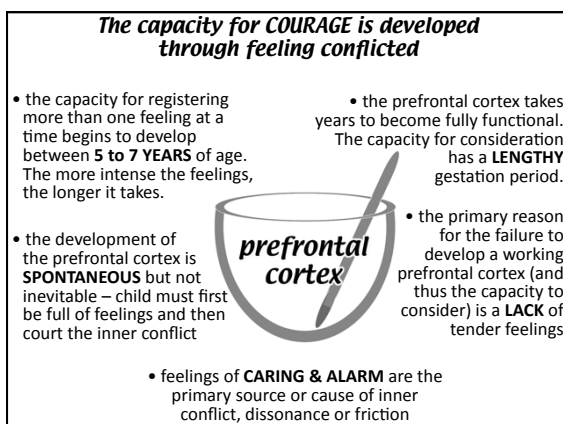

---

---

---

---

---

**ALARM-BASED DEFENSIVE AVOIDANCE****LEVEL 1 – ANXIETY PROBLEMS**

- *flight from alarming things and situations* – involves obsessions and compulsions which can include phobias and paranoia, as well as a preoccupation with staying out of trouble

**LEVEL 2 – AGITATION & ATTENTION PROBLEMS**

- *flight from apprehension and attending to what alarms* – results in significant attention deficits, not being able to stay out of trouble, not being moved to caution, recklessness and carelessness

**LEVEL 3 – ADRENALIN SEEKING PROBLEMS**

- *flight from any sense of vulnerability whatsoever* – the adrenalin rush involved in doing alarming things when devoid of a sense of vulnerability results in being attracted to what alarms and a predisposition for being a trouble-maker

---

---

---

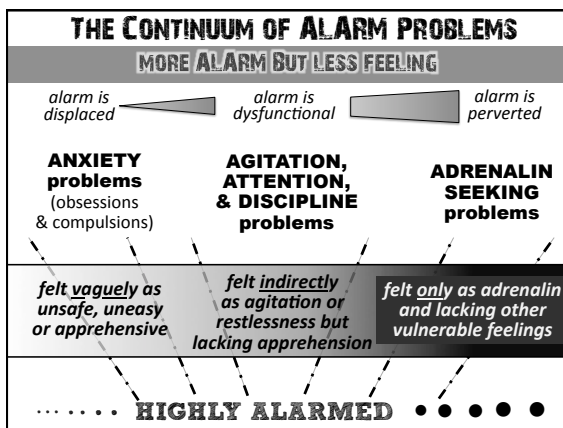

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

A CONTINUUM OF DEFENDEDNESS	
<b>ANXIETY - based</b>	The defensive inhibition of feelings is <b>sufficient</b> enough to interfere with linking the feelings of alarm to the separation faced, but NOT enough to keep from feeling nervous. The result is <b>anxiety</b> .
<b>AGITATION - based</b>	The defensive inhibition of feelings is <b>significant</b> enough to keep from feeling nervous but NOT enough to keep from feeling agitated or restless. In addition, defensiveness in attention results in a blindness to that which truly alarms. The result is <b>agitation without apprehension plus significant deficits in attention</b> .
<b>ADRENALIN -based</b>	The defensive inhibition of feelings is <b>severe</b> enough to keep from feeling nervous, agitated or vulnerable, resulting in feeling ONLY the chemistry of alarm. The result is being <b>attracted to what alarms</b> .

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

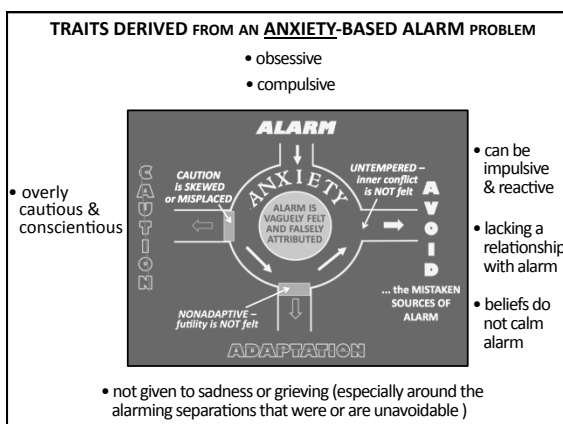

---

---

---

---

---

---

---

---

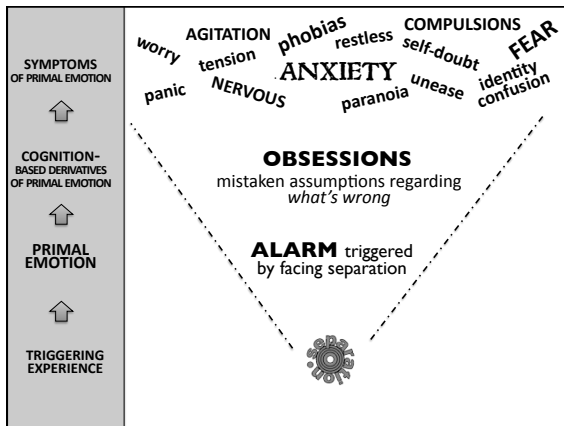

---

---

---

---

---

IRRATIONAL OBSESSIONS (mistakes regarding 'what's wrong')	RESULTING COMPULSIONS (to avoid or reduce alarm)
• someone or something is out to hurt me or to get me	⇒ work at avoiding the monsters and scary creatures, avoid getting conned, uncover people's plots
• something is wrong with my health or my functioning or is going to make me sick	⇒ work at keeping things clean, at not getting sick, at avoiding germs, at avoiding contamination
• something is out of order or out of place	⇒ work at putting things in order and their place
• something is wrong with my body or with how I look	⇒ work at improving one's appearance or at changing one's shape
• some places or situations are dangerous or unsafe	⇒ work at avoiding that which makes one feel unsafe (ie, phobias)
• something has been left undone	⇒ work at remembering to complete one's tasks
• one is 'too much' or 'not enough'	⇒ work at editing or enhancing, diminishing or improving oneself

---

---

---

---

---

---

---

---

---

---

---

---

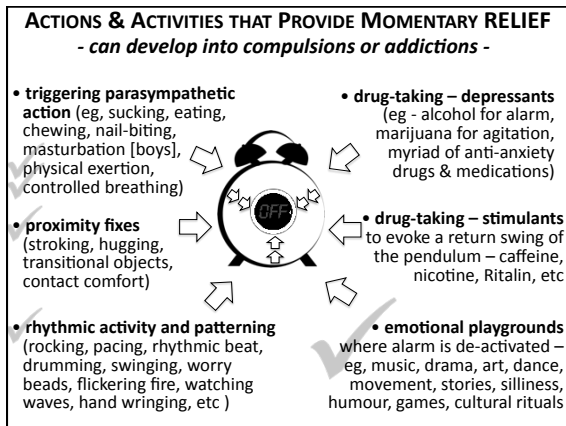

---

---

---

---

---

---

---

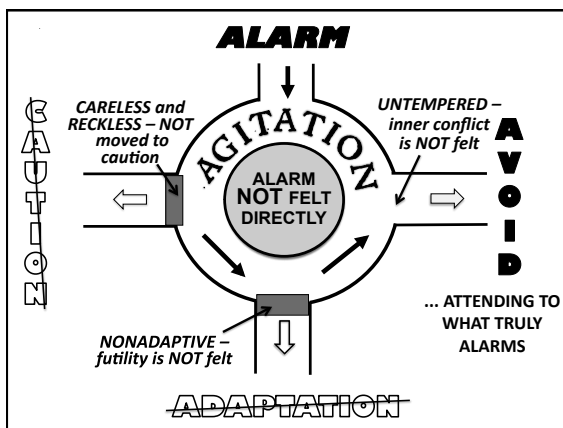

---

---

---

---

---

---

---

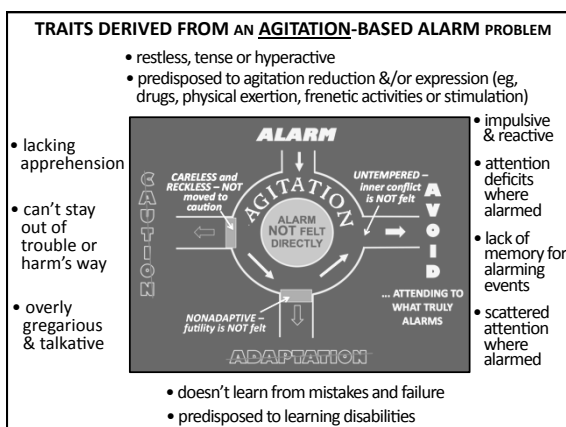

---

---

---

---

---

---

---

#### about **alarm-based** attention problems

- key signs are **'highly agitated'** as IF highly alarmed but **'without apprehension'** as if not at all alarmed
- attention system receives **mixed messages** from the brain: *pay attention to what alarms* and *don't look at what alarms*
- the two primary symptoms are **scattered attention** and significant **attentional deficits** around alarming situations (eg, can't see trouble coming, can't stay out of harm's way, more gregarious than would be appropriate, somewhat reckless and careless, poor memory for alarming situations)
- typically will qualify for an **attention deficit diagnosis** as the syndrome meets the three criteria: difficulty concentrating, restlessness or agitation, and impulsiveness (only two of the three are required for the diagnosis)

---

## THE ALARM SPECTRUM

**SESSION THREE      THE THREE ROOT CAUSES OF  
ESCALATING ALARM IN TODAY'S SOCIETY**

*why children are more alarmed and less able to deal with it*

---

---

---

---

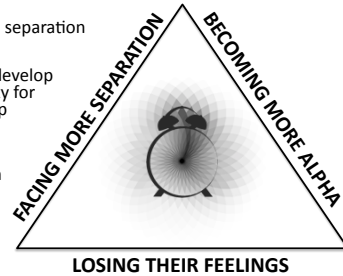

---

---

---

### WHY TODAY'S CHILDREN ARE MORE ALARMED and less able to deal with it

- premature separation
- failure to develop the capacity for relationship
- peer orientation

---

---

---

---

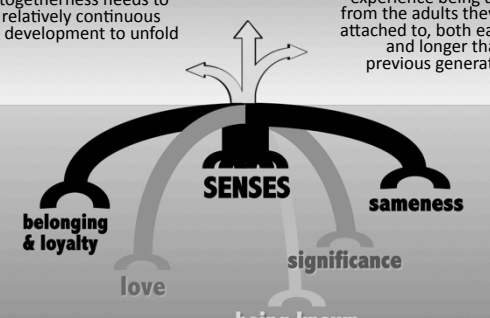

---

---

---

**premature separation** = physical separation before a child has developed more mature relationship-based ways of holding on when apart

- the sense of connection or togetherness needs to be relatively continuous for development to unfold
- today's children typically experience being apart from the adults they are attached to, both earlier and longer than in previous generations

---

---

---

---

---

---

---

### TODAY'S CHILDREN FACE MORE SEPARATION

- 1) more likely to be **APART** from their parents for reasons of divorce, schooling, parental employment, out-of-home care, after-school activities, and digital preoccupations
- 2) when apart from their parents, **NOT** as likely to be **ATTACHED** to the **ADULTS** responsible for them (*contributing factors include smaller nuclear families, loss of extended families, loss of the village of attachment, gradual drifting of school outside the attachment village, loss of culture that would foster the needed child-adult attachments, lack of focus on student-teacher relationships*)
- 3) more likely to become **PEER ORIENTED** as a result of falling through the attachment cracks of today's society

---

---

---

---

---

---

---

---

### PEER ORIENTATION

*Children taking their cues from each other as to how to act, what to do, how to talk, what to wear, how to express oneself, what is valued, what is expected, what is right and what is wrong*

**The competing nature of most peer attachments today (ie, can't be close to both peers and adults simultaneously) pulls children out of orbit from around the adults responsible for them**

---

---

---

---

---

---

---

---

### PEER ORIENTATION FUELS ALARM

- peer attachments are inherently **INSECURE** – the more one's peers matter, the more separation is being faced by default
- robs adults of the power they need to keep social interaction safe
- powerless adults, in turn, resort to alarm-based methods of behaviour management, fueling alarm further
- the peer oriented are drawn to social media where alarming interaction is the norm
- the peer-oriented can be cruel and uncaring to those outside their 'tribe', fueling alarm
- peer orientation robs children of the shielding and protection they need to live in an alarming world
- drives alarm underground as fearlessness is venerated by the peer-oriented and any show of alarm can be shamed or exploited
- peer orientation breeds **ALPHA** children, fueling alarm even further

---

---

---

---

---

---

---

---

---

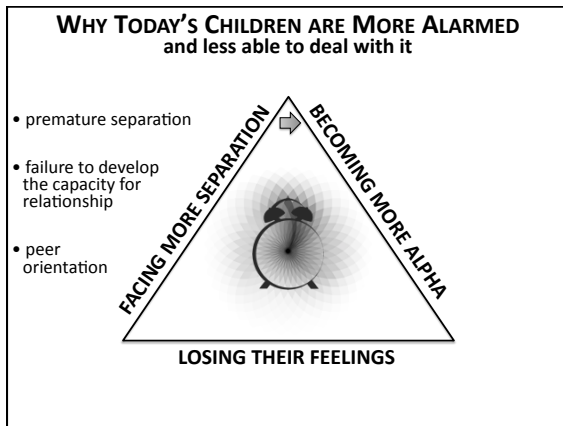

---

---

---

---

---

---

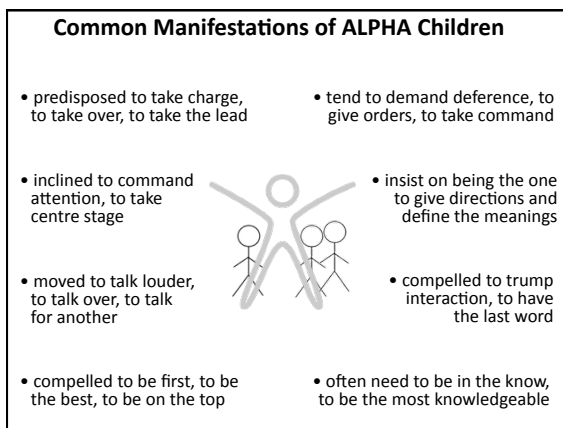

---

---

---

---

---

---

---

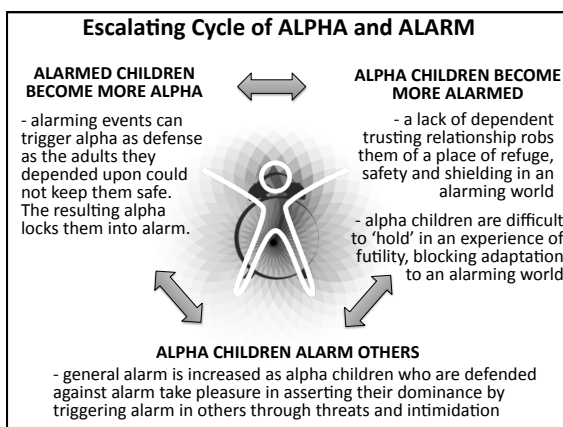

---

---

---

---

---

---

---

### Why Today's Children are Becoming More ALPHA

- is a natural response to stress (ie, facing more separation)
- today's parents and teachers are more child-led, putting the child in the alpha role by default
- today's parents and teachers seem to have more difficulty assuming an alpha posture, resulting in children filling that void
- dependence is not as likely to be invited by today's parents and teachers
- increasing peer orientation renders it unsafe to depend as well as unclear as to who is to take care of whom
- dependence is more likely to be an aversive experience, including using alarm and what children care about, against them

---

---

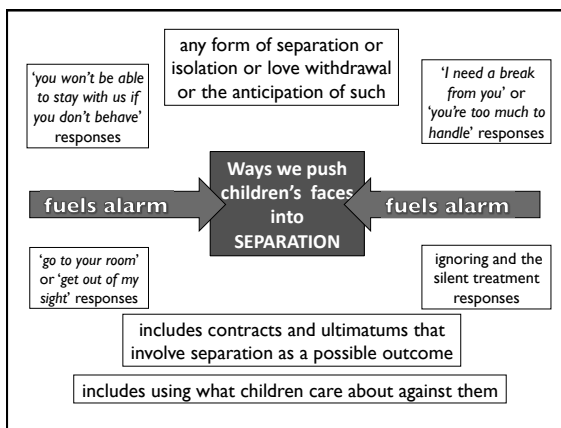

---

---

---

---

---

---

---

---

---

---

---

---

### WHY TODAY'S CHILDREN ARE MORE ALARMED and less able to deal with it

- premature separation
- failure to develop the capacity for relationship
- peer orientation
- failure of adults to inspire dependence
- not safe to depend
- peer orientation

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

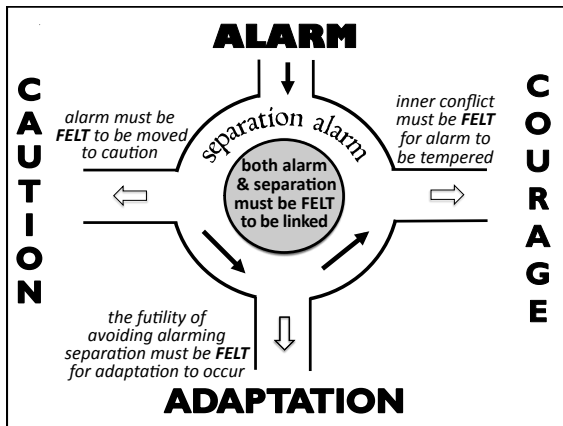

---

---

---

---

---

---

---

---

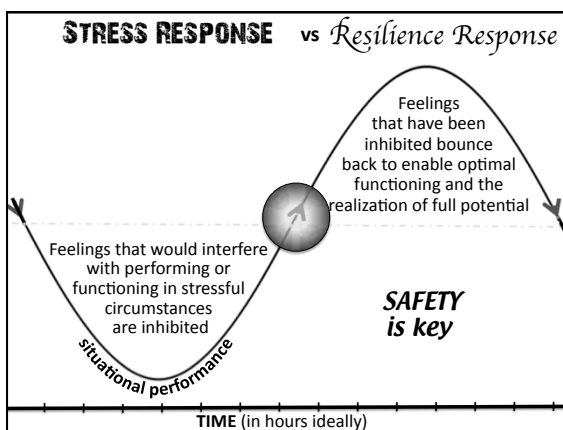

---

---

---

---

---

---

---

---

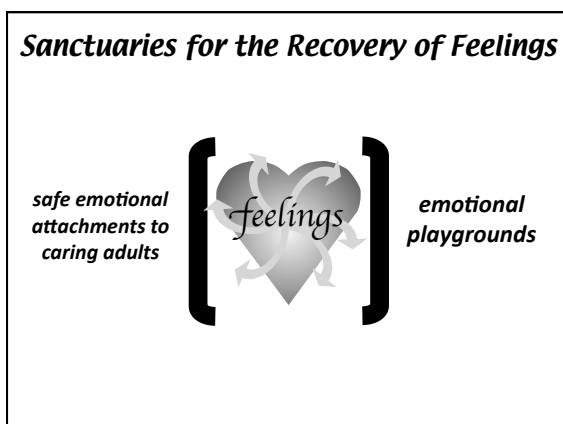

---

---

---

---

---

---

**THE ALARM SPECTRUM**

**SESSION FOUR – THE MOST PROMISING  
INTERVENTIONS FOR ALARM-BASED PROBLEMS**

---

---

---

---

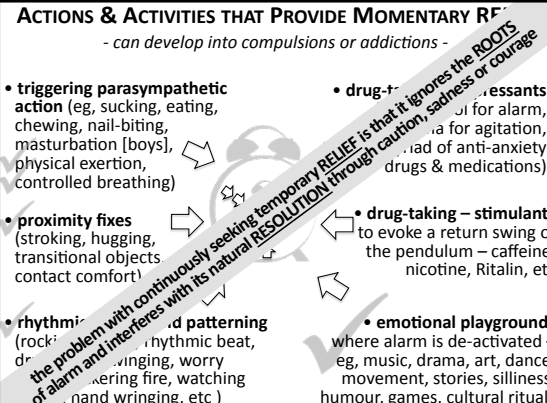

---

---

---

---

**ACTIONS & ACTIVITIES THAT PROVIDE MOMENTARY RELIEF**  
- can develop into compulsions or addictions -

- **triggering parasympathetic action** (eg, sucking, eating, chewing, nail-biting, masturbation [boys], physical exertion, controlled breathing)
- **proximity fixes** (stroking, hugging, transitional objects, contact comfort)
- **rhythmic and patterning** (rocking, rhythmic beat, driving, worry, watching fire, watching, and wringing, etc.)
- **drug-taking – stimulants** to evoke a return swing of the pendulum – caffeine, nicotine, Ritalin, etc
- **emotional playgrounds** where alarm is de-activated – eg, music, drama, art, dance, movement, stories, silliness, humour, games, cultural rituals
- **drug-taking – depressants** to evoke a return swing of the pendulum – alcohol for alarm, benzodiazepines for agitation, a myriad of anti-anxiety drugs & medications)

---

---

---

---

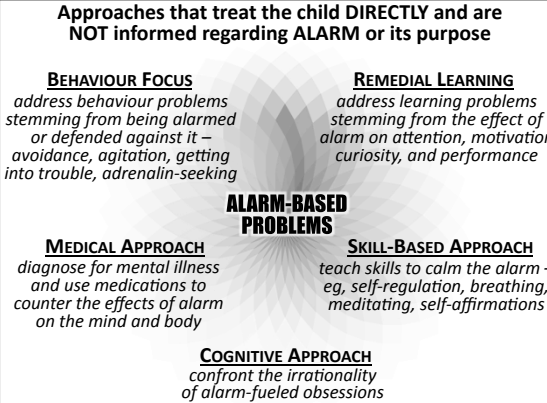

---

---

---

---

**Approaches that treat the child DIRECTLY and are NOT informed regarding ALARM or its purpose**

**ALARM-BASED PROBLEMS**

<p><b>BEHAVIOUR FOCUS</b> address behaviour problems stemming from being alarmed or defended against it – avoidance, agitation, getting into trouble, adrenalin-seeking</p>	<p><b>REMEDIAL LEARNING</b> address learning problems stemming from the effect of alarm on attention, motivation, curiosity, and performance</p>
<p><b>MEDICAL APPROACH</b> diagnose for mental illness and use medications to counter the effects of alarm on the mind and body</p>	<p><b>SKILL-BASED APPROACH</b> teach skills to calm the alarm – eg, self-regulation, breathing, meditating, self-affirmations</p>
<p><b>COGNITIVE APPROACH</b> confront the irrationality of alarm-fueled obsessions</p>	

---

---

---

---

---

---

---

---

---

---

---

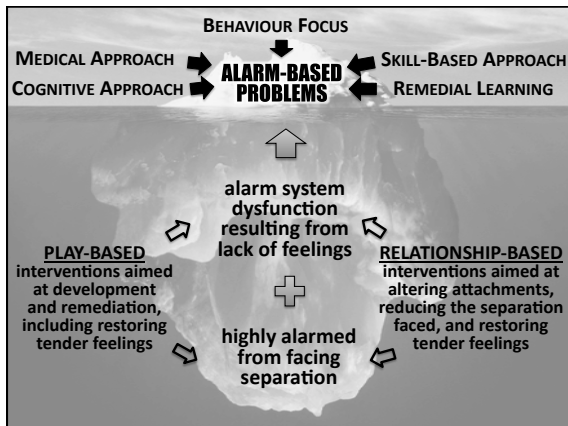

---

---

---

---

---

---

---

---

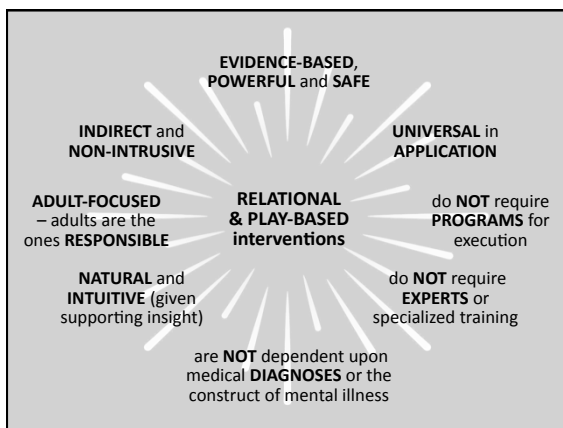

---

---

---

---

---

---

---

---

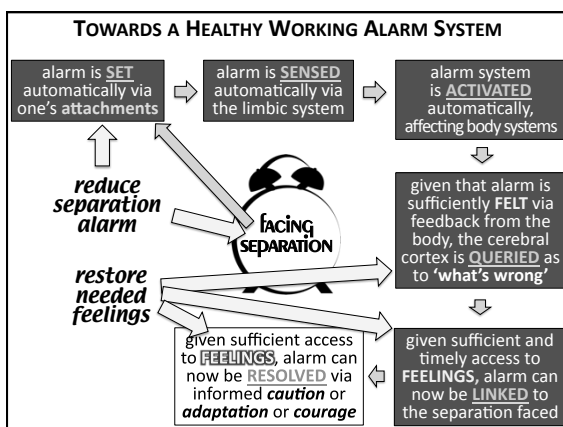

---

---

---

---

---

The ultimate challenge in addressing alarm problems is to **reduce the separation** being faced and **restore the feelings** of separation and alarm, to the point where the alarm system can more easily move the child ...

... to **CAUTION** if that is possible

... to **'CRY'** if that is futile

... to take **COURAGE** if what alarms is in the way

---

---

---

---

---

---

---

---

---

---

---

---

---

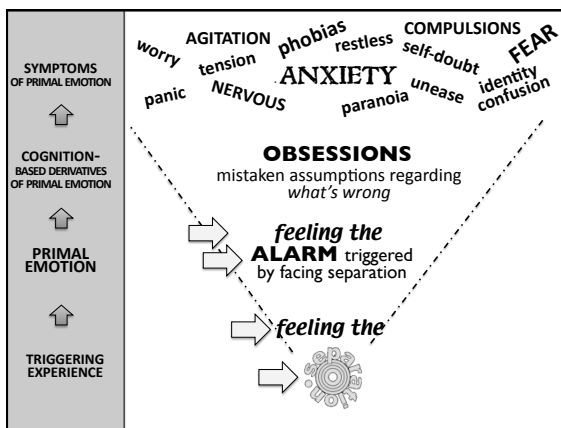

---

---

---

---

---

---

---

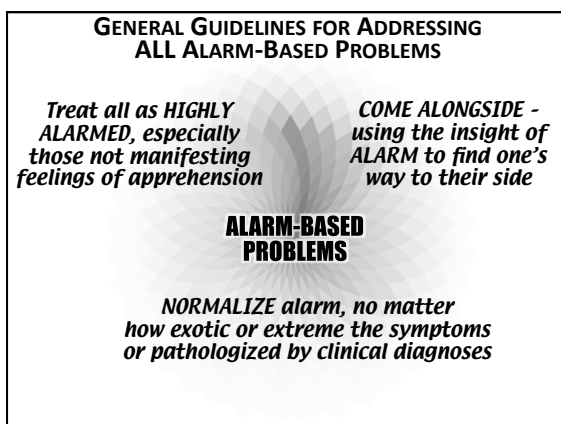

---

---

---

---

---

---

---

---

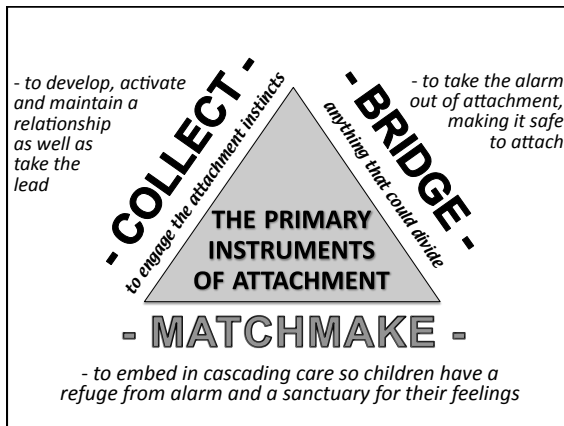

---

---

---

---

---

---

---

**Embed in Cascading Care**

- to **ADDRESS** peer orientation and alpha stuckness in order to reverse their impact on alarm
- to create a **REFUGE** as well as a safe place for feelings to **BOUNCE BACK**
- to **EMPOWER** adults to help cultivate a child's relationship with alarm and resolve it via caution or sadness or courage

- to give adults more **CONTROL** over the wounding and alarming social interaction between children
- to **SHIELD** a child against the impact of alarming interaction
- taking care of younger children provides a suitable & non-alarming **OUTLET** for children's own ALPHA instincts

*- hierarchical relationships with caring adults as well as younger children in need of their care and protection -*

---

---

---

---

---

---

---

---

---

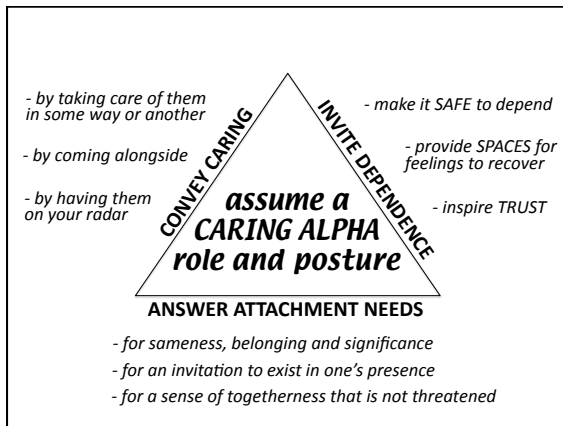

---

---

---

---

---

---

---

---

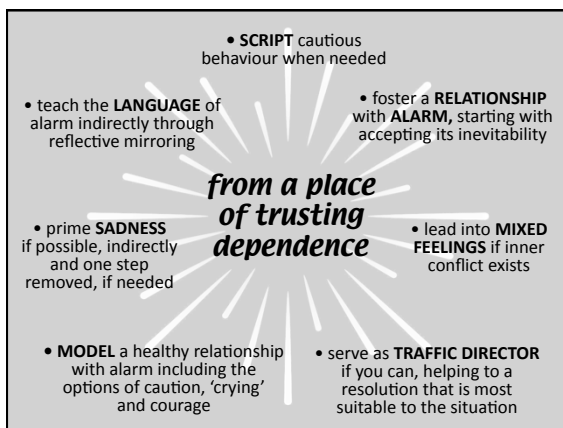

---

---

---

---

---

---

---

---

---

---

---

---

---

---

***PLAYING with ALARM***

- peek-a-boo play
- rescue play
- startle play
- safe hide-away play
- ambush games
- dare games
- 'falling' play
- monsters & scary creature play
- safe-at-home play
- scary stories, games and activities

---

---

---

---

---

---

---

***Playing with facing separation***

- GAMES
- POETRY & ART
- TRAGIC STORIES
- HUMOUR
- MUSIC
- CULTURAL FESTIVALS

---

---

---

---

---

---

---

***Addressing ALARM through PLAY***

- playfully alarming DEVELOPS the alarm system and BUILDS tolerance of alarm
- play provides temporary REST and RELIEF from alarm

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

***Addressing ALARM through PLAY***

- playfully alarming DEVELOPS the alarm system and BUILDS tolerance of alarm
- play provides temporary REST and RELIEF from alarm
- RE-PLAY of alarming scenarios can lead to eventual resolution
- alarm can be MASTERED in play

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

***Addressing ALARM through PLAY***

- playfully alarming DEVELOPS the alarm system and BUILDS tolerance of alarm
- play provides temporary REST and RELIEF from alarm
- RE-PLAY of alarming scenarios can lead to eventual resolution
- alarm can be MASTERED in play
- play can provide SAFE DISCHARGE for alarm-fueled compulsions, agitation and adrenaline-seeking

- SADNESS is much easier accessed in the play mode

---

---

---

---

---

---

---

---

**LULLABIES and SEPARATION ALARM**

- DIVERTS ATTENTION away from the separation being faced as music grabs attention
- DISENGAGES the attachment drive and thus the separation that would be faced as a result
- evokes the sensation of being gently ROCKED which soothes alarm
- puts the brain and body into the REST mode, including parasympathetic activity
- can re-activate the primordial connection and its comforting sense of deep FUSION
- gives PRIORITY to the message of CONNECTION (if any) being delivered through the music
- primes a SADNESS that can resolve alarm, enable letting go, and help adapt to the separation being faced

---

---

---

---

---

---

---

---

***Addressing ALARM through PLAY***

- playfully alarming DEVELOPS the alarm system and BUILDS tolerance of alarm
- play provides temporary REST and RELIEF from alarm
- RE-PLAY of alarming scenarios can lead to eventual resolution
- alarm can be MASTERED in play
- play can provide SAFE DISCHARGE for alarm-fueled compulsions, agitation and adrenaline-seeking
- SADNESS is much easier accessed in the play mode
- play is the perfect scenario for the 'DRAGON & TREASURE' experience
- obsessions and compulsions can be DEFUSED in play

---

---

---

---

---

---

---

---

### Bringing obsessions and compulsions into play

*When my son was younger, around 4 or 5, he developed rituals upon walking from room to room, from inside the car to outside and so on. He would walk one step forward and then back and then forward and then back again a certain number of times. At some point I began taking his hand and "dancing" back and forth with him - which made him smile. After some time, I would lead him - get there first and eventually began to add new motions to his "dance". That turned it into a game and at some point, I'm not even sure when, this habit disappeared.*

---

---

---

---

---

---

---

### Addressing **ALARM** through **PLAY**

- 
- playfully alarming **DEVELOPS** the alarm system and **BUILDS** tolerance of alarm
  - **SADNESS** is much easier accessed in the play mode
  - play provides temporary **REST** and **RELIEF** from alarm
  - play is the perfect scenario for the 'DRAGON & TREASURE' experience
  - RE-PLAY of alarming scenarios can lead to eventual resolution
  - obsessions and compulsions can be **DEFUSED** in play
  - alarm can be **MASTERED** in play
  - **ATTENTION** problems are best addressed through play
  - play can provide **SAFE DISCHARGE** for alarm-fueled compulsions, agitation and adrenalin-seeking

---

---

---

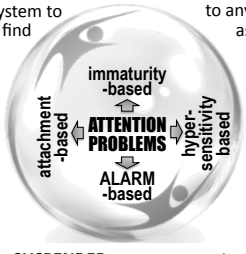

---

---

---

---

### Play Holds the Most Promise

- 
- **PLAY** is the best **CONTEXT** for the attention system to develop, repair, or find 'work-arounds'
  - **CURIOSITY** is the best **ANTIDOTE** to any attention problem, as it can pull the child through in their area of interest
  - attachment and alarm are at **REST**, allowing attention some free time to play
  - attention is **DRAWN** rather than driven in play, allowing for optimal functioning
  - defensive filters are **SUSPENDED** in the play mode, stopping the mixed messages in alarm-based attention problems
  - play facilitates prefrontal cortex development, resolving impulsiveness and **MATURING** the attention system

---

---

---

---

---

---

---

---

---

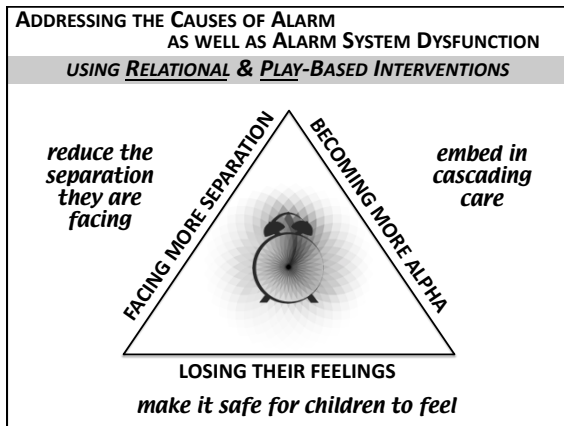

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

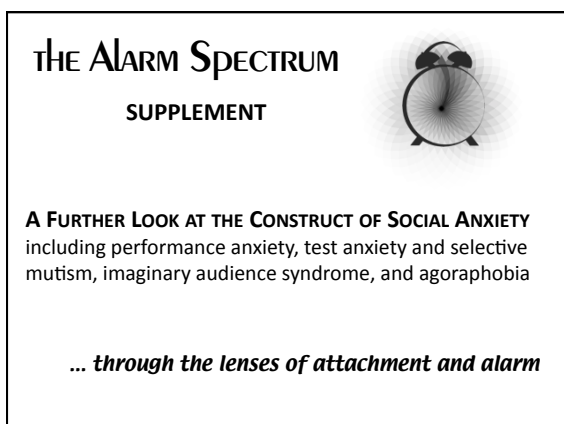

---

---

---

---

---

---

**about the medical disease model's SOCIAL ANXIETY DISORDER (SAD)**

- classified as mental illness generally assumed to be the result of over-reactive fear circuitry in the brain which may have been the result of an unpleasant or aversive social experiences
- is characterized by nervousness in social situations
- onset most typically in adolescence in youth that are extremely shy

**NIMH** - key feature of social anxiety disorder is 'an intense persistent fear of being watched and judged by others'

**DSM V** - 'a marked and persistent fear of one or more social or performance situations in which the person is exposed to unfamiliar people or to possible scrutiny by others' (includes performance anxiety and test anxiety)

---

---

---

---

---

---

---

---

*the fusion and confusion of shyness and social anxiety*

- **AVOIDANCE** is the manifest issue in both alarm and shyness – resulting in the projection of 'fear' as the key issue in both
- both are presumed to be the result of a **DISORDERED** brain (over-reactive fear circuitry), possibly triggered by aversive social experiences
- both are considered a **DISEASE** by leading 'experts' on shyness and social anxiety (eg, Zimbardo)
- both are presumed to be on the same **CONTINUUM** of **dysfunction** – shyness leading to social anxiety disorder if left unchecked
- today's dictionaries have drifted towards making the words **SYNONYMOUS** – nervous around people
- in old English and German, 'shy' used first in reference to horses who would shrink from human contact

**social anxiety**

---

---

---

---

---

---

---

---

*teasing apart shyness and social anxiety*

- an ALARM-based problem** **social anxiety** ↔ **shyness** **RESERVED for one's people**
- rooted in the primal emotion of alarm
  - triggered by facing separation
  - leading to caution or avoidance of whatever alarms
  - an attachment-based **INSTINCT** to **AVOID** contact with strangers for the purpose of protecting existing attachments
  - a natural manifestation of attachment **POLARIZATION** - the pursuit of proximity informs one's resistance to proximity

---

---

---

---

---

---

---

---

**SHYNESS through the lens of attachment**

- no matter how shy a child may be to the outside world, they are not shy inside their attachments
- has a significant genetic component as well as shaped by culture and child-rearing factors
- becomes more pronounced & potentially incapacitating as the child's village becomes smaller and attachments become more exclusive
- becomes more manifest and potentially crippling as today's parents depend increasingly upon adults who are outside their child's village of attachment to help raise and educate their children

to be  
**SHY**  
is to be  
**RESERVED**  
for one's people

- what is typically reserved are certain forms of connectivity like eye-contact, talking, touch, receiving comfort, and even smiles
- the instinct is elevated when dependency needs are high as in the young and immature

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

positive polarity	negative polarity
seeks to be with	shies away from
makes contact	resists contact
endears	alienates
looks up to	looks down upon
attends & listens to	ignores & disregards
imitates & emulates	mocks & mimics
possesses	disowns
is loyal to	opposes & betrays
holds dear	holds in contempt
attempts to find favour	ridicules and derides
makes things work for	spoils things for
seeks to matter to	discounts as not mattering
seeks to please	annoys and irritates
befriends	eschews
loves	loathes
shares secrets with or keeps the secrets of	keeps secrets from or creates secrets about

---

---

---

---

---

---

---

---

**SHYNESS through the lens of attachment**  
*healthy development is the ultimate answer  
to not being driven by one's shyness*

- attachments become less threatened as they grow **DEEPER**
- attachments are less urgently needed as the capacity for functioning **OUTSIDE** of attachment develops
- emerging **INTERESTS** and the desire to **VENTURE FORTH** will draw the child into their world
- **SADNESS** about the futility of avoiding strangers leads to **ADAPTING** to a world full of strangers
- the developing capacity for **CONFLICTING FEELINGS** will enable the child to take up a relationship with shyness, **TEMPERING** shyness and setting the stage for not letting shyness get in the way of life

to be  
**SHY**  
is to be  
**RESERVED**  
for one's people

---

---

---

---

---

---

---

---

### How **SHYNESS** can evolve into '**SOCIAL ANXIETY**'

*SHYNESS can exist without alarm, especially where the conditions for shyness exist (ie, strangers are present) but there is no threat to the contact and closeness with those attached to. Shyness in itself is NOT FELT as fear or alarm, but rather as discomfort or as 'not right'.*

#### **SHYNESS + ALARM = a social anxiety problem**

- when strangers **DO** present a threat to closeness or connection with those attached to, and this alarm is **NOT** felt directly enough as separation alarm to be properly linked and resolved, it makes sense that *strangers* could indeed become the new 'monsters' out there, leading to avoidance now being double-rooted – alarm & shyness
- the **ORDERED** nature of both these dynamics becomes rather obvious for those with some **INSIGHT** about alarm and shyness, making a diagnosis of disorder highly inappropriate and counter-indicated and typically leading to the wrong kinds of interventions

---

---

---

---

---

---

---

---

### SOLUTIONS TO SHYNESS

- **ENVELOP** with attachment, providing a safe bubble within a society of strangers

- **MATCHMAKE** to extend the village of attachment

- cultivate a **DEEPER** attachment

- shyness is **SUSPENDED** in the play mode, providing a leading edge for learning as well as social interaction & integration

**SADNESS** - adapting to life where strangers cannot be avoided

**COURAGE** - a developed capacity for mixed feelings sets the stage for living with shyness and for not letting it get in the way of life

---

---

---

---

---

---

---

---

### ANSWERS TO SOCIAL ANXIETY

(BASICALLY SIMILAR TO THE ANSWERS TO SHYNESS)

- **REDUCE** alarm including social anxiety by reducing the separation faced

- **EMBED** in cascading care

- a **DEEPER** attachment

- play is a **SANCTUARY** of **SAFETY** as attachment instincts are **NOT** in the work mode

**SADNESS** - adapting to life where alarming separation cannot be avoided

**COURAGE** - a developed capacity for mixed feelings sets the stage for living with alarm and for not letting it get in the way of life

---

---

---

---

---

---

---

---

PERFORMANCE ANXIETY		
- typically defined as extremely nervous about performing in public -		
DISEASE MODEL	ALARM MODEL	SHYNESS MODEL
- considered a mental illness if interfering with life - classified as a social anxiety disorder	- if alarm is the primary dynamic, is because of the separation being faced in performing	- if shyness is the primary dynamic, normalize the experience of 'exposure' and self-consciousness when performing
- assumed to be caused by over-reactive fear circuitry possibly triggered by negative experience	- if young & dependent, help create a sense of safety	- defuse shyness through creating a context of safe relationship &/or bring playfulness into the 'performance'
- typical treatments include drugs, behaviour therapy and cognitive behaviour therapy	- if older, once alarming separation is felt, support the sadness that leads to adaptation or the courage to not let alarm get in the way	

---

---

---

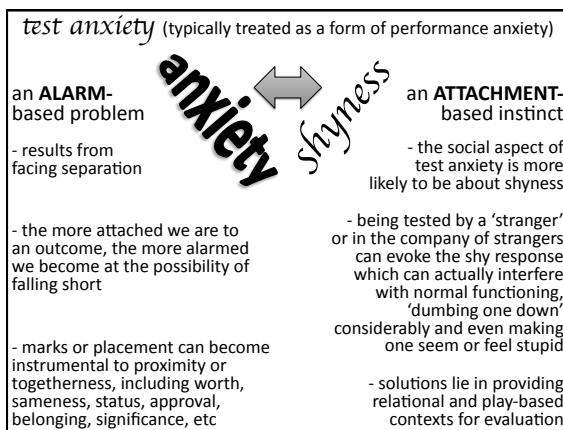

---

---

---

---

---

---

---

---

---

---

---

**social anxiety** and the **IMAGINARY AUDIENCE SYNDROME**

**IMAGINARY AUDIENCE SYNDROME** – a common young adolescent phenomenon resulting from the onset of the capacity to reflect upon themselves. When they become the object of their own attention, they mistakenly assume that they are the object of everyone's attention. This developmental delusion is typically grown out of by late adolescence if not stuck developmentally.

- shyness could certainly exacerbate the self-consciousness when not with one's own people, possibly incapacitating an adolescent in certain situations
- when not informed by normal adolescent development and by attachment-based shyness, clinicians practicing out of the medical approach can easily mistake the imaginary audience syndrome for 'mental illness' of the social anxiety variety, probably contributing to the idea of adolescence as being the onset of social anxiety disorder

SELECTIVE MUTISM	
- when a child <b>CAN</b> talk but <b>DOESN'T</b> talk where needed or expected -	
DISEASE MODEL	SHYNESS MODEL
<ul style="list-style-type: none"> <li>- considered a mental illness and classified as an anxiety disorder with 90% qualifying for a social anxiety disorder diagnosis</li> <li>- typical treatments include behaviour therapy and speech therapy</li> </ul>	<ul style="list-style-type: none"> <li>- when quite shy as well as exclusively attached, it only makes sense that talking would be <b>RESERVED EXCLUSIVELY</b> for this attachment</li> <li>- <b>TREATMENT</b> is relational-based (eg, creating an attachment through the child's working attachment) and/or play-based (where shyness is not activated or operational)</li> <li>- what is <b>OUT OF ORDER</b> is a society that doesn't recognize shyness or the need to attach children to the adults responsible for them</li> </ul>

Attachment-Based <b>CRITIQUE</b> of the <b>SOCIAL ANXIETY</b> construct
<ul style="list-style-type: none"> <li>• is primarily a <b>PROJECTION OF FEAR</b> that is based upon the manifest avoidance of people and of performing in public, in the absence of any insight regarding shyness as a protective attachment instinct (and typically blind to instincts or inner springs to action in general)</li> <li>• the <b>DISORDER</b> is not in the individual but in our <b>SOCIETY</b> which has evolved out of sync with our attachment nature and especially the irreducible needs of children</li> <li>• it is not social <b>SKILLS</b> that are required, but the <b>INSIGHT</b> that children need to be attached to the adults responsible for them for all to function properly in society, including parenting and school</li> <li>• the current medical disorder model is 'diseased' or 'toxic' in that it <b>PATHOLOGIZES</b> processes and dynamics that are completely natural and for a purpose (eg, shyness, sadness, detachment, counterwill), and declares as mentally ill an increasing number who do not fit well in this disordered society</li> </ul>

## Information regarding the NEUFELD INSTITUTE, including our VIRTUAL CAMPUS and ONLINE COURSES

The **Neufeld Institute** is a world-wide nonprofit charitable organization created for the purpose of putting developmental science into the hands of those responsible for our children. Our way of doing this is through disseminating the more than twenty-five courses that have been developed by Dr. Gordon Neufeld that articulate the attachment-based developmental approach. We have about 25 faculty and over 200 course facilitators delivering our courses in more than 10 languages to parents, teachers and helping professionals.

Our online courses can be taken at anytime and from anywhere. Individuals can take these courses through scheduled online classes or through individual self-paced study. Groups of ten or more can arrange for their own customized support. The online courses consist of much more than the video-material: study guides, discussion forums, supplemental material, as well as access to all the resources on campus.

Our online courses are housed on a virtual campus that is filled with resources, support materials and discussion forums. The online campus is open to anyone who has taken one of our seminars or courses, whether it has been delivered live by Dr. Neufeld or a faculty member, as a video-course by a Neufeld Course Facilitator, or as an online campus course. Campus membership is \$150 for the initial year and \$120 for renewal. Benefits of course membership include product discounts, access to the campus library, discussion forums, periodic Q&A classes with faculty, and much more. The most significant benefit for many campus members is having continued access to the particular course materials that correspond to the course or courses they have taken – if that applies. Our campus typically is home to about 2500 subscribers and students on study-passes at any given time.

Our courses are aimed for parents, teachers and helping professionals. The **Power to Parent** series is typically the best way for parents to get immersed in the attachment-based developmental approach. This can be augmented by other courses such as **Discipline, Counterwill, Alpha Children, Anxiety, Aggression** or **Adolescence**, depending upon the particular problems they may be experiencing. Educators are more likely to start with the **Aggression** course or the **Teachability Factor** as well as the **Preschoolers** course or **Adolescence** course, depending upon the age of their students. This too can be augmented by the problem-centred courses.

Helping professionals will definitely want to take the **Attachment Puzzle, Transplanting Children, Science of Emotion**, and **Resilience** courses.

Serious students who want to master the attachment-based developmental paradigm in order for it to become their way of thinking as well as their modus operandi will want to take the three Neufeld Intensives: **Making Sense of Kids, The Separation Complex** and **Becoming Attached**. These Intensives lay the conceptual foundations of this approach in such a way that the application becomes universal.

Our Intensives open the door to further study and support for sharing the material. We also have a support program for fully credentialed helping professionals, as well as further training in implementing the attachment-based developmental paradigm in therapeutic practice.

Our new series on the Science of Play is some of Dr. Neufeld's most exciting material – relevant to anyone and everyone. **Play 101** sets the stage for the more advanced courses: **Play & Attachment** and **Play & Emotion**.

**NOTE re Campus Membership Qualification:** This seminar qualifies you to register for campus membership. An annual subscription fee applies (see above). Please indicate that you have taken this course when you go to register for campus membership at our campus portal page - **[campus.neufeldinstitute.org](http://campus.neufeldinstitute.org)**.

For further information about the Neufeld Institute, including its courses and programs, please consult our website - **[NeufeldInstitute.org](http://NeufeldInstitute.org)**.
